

## Report No. 8: Week ending 27 June 2021

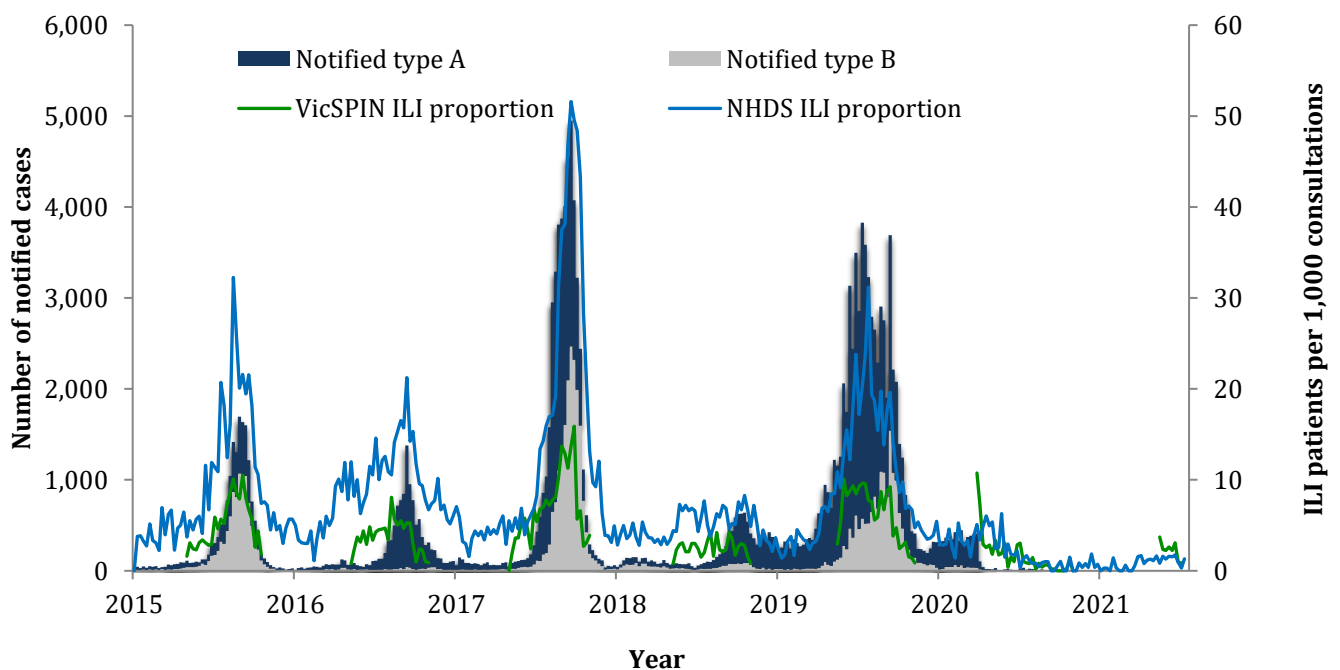

### Overview: The 2021 influenza season so far

Influenza-like illness (ILI) is **below the average activity** threshold for this reporting week, with **0.9 ILIs per 1000 patients seen**.

The number of notified cases of laboratory confirmed influenza is **99% lower** than the number notified by the same time in 2020. The majority of notified cases have been **type A (87%)**. There has also been one case of a co-infection with influenza type A and B, and two cases of influenza type C.

**Two swabs** were received from VicSPIN this week, however only one result was available at the time of reporting. There were **zero swabs** that tested positive for influenza.

*Figure 1. Routinely notified influenza cases, VicSPIN and National Home Doctor Service (NHDS) ILI consultation proportions, Victoria, 2015 – 2021*

### National Home Doctor Service (Victoria)

- The ILI proportion for this week is **1.3 ILI cases per 1,000** patients seen (Figure 1).
- ILI activity is **well below** the average activity threshold range of 10-35 ILI cases per 1,000 patients seen.

### Victorian Sentinel Practice Influenza Network

- The ILI proportion measured by VicSPIN for this week, is below the average activity threshold with **0.9 ILI cases per 1,000 patients seen**. (Figures 1 & 2, and Table 1).
- **Two swabs** were received from VicSPIN this week (Figure 3 and Table 1), however only one result was available at the time of reporting.
- There were zero **swabs** that tested positive for influenza. (Figure 3 and Table 1).

Table 1. Summary of reporting from general practice sentinel sites, week ending 27 June 2021.

	Week	Year-to-date
Number (%) of general practitioners reporting	29 (94%)	
Total patients seen	2,308	20,414
Total patients with ILI	2	47
Consultation rate for ILI (per 1,000 patients)	0.9	2.3
Number of specimens received	2	24
Number (%) positive for influenza	0 (0%)	1 (4.2%)

Figure 2. VicSPIN ILI consultation proportions, Victoria, 2017, 2018, 2019, 2020 and 2021

## Observations from other influenza surveillance systems

### Notified cases of laboratory confirmed influenza

- The number of notified cases of laboratory confirmed influenza for this week, is 2 cases.
- A total of 68 cases of laboratory confirmed influenza have been processed so far in 2021, a 99% decrease on the number notified by the same time in 2020 (Figure 1).
- Year to date, 87% of notified cases have been type A (20% of Type A cases are aged less than 10 years and 20% aged 65 years and over) and 9% have been type B (100% of Type B cases are aged between 10 and 65 years).
- There have been two notified case of influenza type C and one notified case of co-infection with influenza type A and B.

### World Health Organization Collaborating Centre for Reference and Research on Influenza

- The strains included in the 2021 egg-based influenza quadrivalent vaccine are: A/Victoria/2570/2019 (H1N1)pdm09-like virus, A/Hong Kong/2671/2019 (H3N2)-like virus, B/Washington/02/2019-like (B/Victoria lineage) and B/Phuket/3073/2013-like (B/Yamagata lineage) virus. The trivalent vaccine excludes the B/Yamagata lineage virus.
- The strains included in the 2021 cell-based influenza quadrivalent vaccine are: A/Wisconsin/588/2019 (H1N1)pdm09-like virus, A/Hong Kong/2671/2019 (H3N2)-like virus, B/Washington/02/2019-like (B/Victoria lineage) and B/Phuket/3073/2013-like (B/Yamagata lineage) virus.

- A total of 0 Victorian isolates have been strain-typed by the WHO to date:
  - 0 as A/Victoria/2570/2019-Like
  - 0 as A/Victoria/2570/2019-Low Reactor
  - 0 as A/Darwin/726/2019-Like
  - 0 as A/Darwin/726/2019-Low Reactor
  - 0 as B/Washington/02/2019-Like
  - 0 as B/Washington/02/2019-Low Reactor
  - 0 as B/Phuket/3073/2013-Like
  - 0 as B/Phuket/3073/2013-Low Reactor

N.B. A/Darwin/726/2019 is the cell equivalent of A/Hong Kong/2671/2019-H3N2 vaccine strain.

- No isolates have shown resistance to zanamivir or oseltamivir, among the 9 Australian isolates tested so far in 2021.
