

Report No. 12: Week ending 26 June 2022

Overview

In 2022, the Victorian Sentinel Practice Influenza Network (**VicSPIN**), will report on influenza, SARS-CoV-2 and other respiratory viruses circulating in the community.

The 2022 influenza season so far

Influenza-like illness (ILI) activity is currently **within the average** threshold for this week with **9 ILIs per 1000 patients seen**.

The number of notified cases of laboratory confirmed influenza is **over 442 times higher** than the number notified by the same time in 2021 but only **24% higher** than the number in 2019 prior to the COVID pandemic. **Most** notified cases have been **type A (99.9%)** (29% of type A cases are aged less than 10 years and 8% aged 65 years and over), **ten cases have been type B (0.03%)** and **six cases have been type A and type B (0.02%)**.

Six swabs were received from VicSPIN this week.

Zero swab tested positive for **influenza**.

Two swabs tested positive for **RSV**, **two swabs** tested positive for **parainfluenza** and **one swab** tested positive for **picornavirus**.

The 2022 SARS-CoV-2 case numbers so far

The number of routinely notified COVID-19 cases based on PCR and RAT testing so far in 2022 is **1,899,672 cases**.

The number notified by the same time in 2021 was **330 cases**.

There have been **48,902 cases** reported in the past week.

There have been **21,382,804** PCR tests to date. The total number of rapid antigen tests (RATs) conducted is unknown.

Zero of the six swabs received from VicSPIN this week tested positive for **SARS-CoV-2**.

Figure 1. Routinely notified influenza cases and VicSPIN ILI consultation proportions, Victoria, 2015 – 2022

Figure 2. Daily routinely notified SARS-CoV-2 cases based on PCR and RAT testing, Victoria, 2020 – 2022

Victorian Sentinel Practice Influenza Network

- The ILI proportion measured by VicSPIN for this week is **within** the average activity threshold with **9 ILI cases per 1,000 patients seen**. (Figures 1 & 3, and Table 1)
- **Six swabs** were received from VicSPIN this week. (Figure 4 and Table 1)
- **Zero swabs** tested positive for influenza. (Figure 4 and Table 1)
- **Zero swabs** tested positive for SARS-CoV-2. (Figure 4 and Table 1)
- **Two swabs** tested positive for RSV, **two swabs** tested positive for parainfluenza and **one** swab tested positive for picornavirus. (Figure 4)

Table 1. Summary of reporting from general practice sentinel sites, week ending 26 June 2022.*

	Week	Year-to-date
Number (%) of general practitioners reporting	27 (96%)	
Total patients seen	1,558	20,387
Total patients with ILI	14	180
Consultation rate for ILI (per 1,000 patients)	9.0	8.8
Number of specimens received	6	67
Number (%) positive for influenza	0 (0%)	25 (37%)
Number (%) positive for SARS-CoV-2	0 (0%)	8 (12%)

* These numbers are subject to change as data are processed and updated.

Observations from other influenza and SARS-CoV-2 surveillance systems

Notified cases of laboratory confirmed influenza and SARS-CoV-2

- The number of notified cases of laboratory confirmed influenza entered so far for this week is 1,119 (Table 2).
- A total of 30,096 cases of laboratory confirmed influenza have been processed so far in 2022, over 442-fold increase on the number notified by the same time in 2021 but only 24% higher than in 2019, prior to the COVID pandemic (Figure 1 and Table 2).
- Year to date, 99.9% of notified cases have been type A (29% of Type A cases are aged less than 10 years and 8% aged 65 years and over), ten cases (0.03%) have been type B and six cases (0.02%) have been type A and B.
- The number of total SARS-CoV-2 cases for this week is 48,902 (Table 2).
- A total of 1,899,672 probable and confirmed SARS-CoV-2 cases have been notified so far in 2022 compared with 330 for the same time in 2021 (Table 2)
- There have been 21,382,804 PCR tests to date. The total number of rapid antigen tests (RATs) conducted is unknown
- These numbers are subject to change as data are processed and uploaded.

Table 2. Summary of notified influenza and SARS-CoV-2 cases, for week ending 26 June 2022 and Year To Date (YTD) 2019 – 2022.

	Week	2022 YTD	2021 YTD	2020 YTD	2019 YTD
Notified influenza cases	1,119	30,096	68	4766	24,321
Notified SARS-CoV-2 cases	48,902	1,899,672	330	1984	N/A

World Health Organization Collaborating Centre for Reference and Research on Influenza

- The strains included in the 2022 egg-based Southern Hemisphere seasonal influenza quadrivalent vaccines are: A/Victoria/2570/2019 (H1N1)pdm09-like virus, A/Darwin/9/2021 (H3N2)-like virus, B/Austria/1359417/2021-like (B/Victoria lineage) virus and B/Phuket/3073/2013-like (B/Yamagata lineage) virus.]
- The strains included in the 2022 cell-based Southern Hemisphere seasonal influenza quadrivalent vaccines are: A/Wisconsin/588/2019 (H1N1)pdm09-like virus, A/Darwin/9/2021 (H3N2)-like virus, B/Austria/1359417/2021-like (B/Victoria lineage) virus and B/Phuket/3073/2013-like (B/Yamagata lineage) virus.
- A total of 671 Victorian isolates has been strain-typed by the WHO to date. (Fig. 5)

Figure 5. Victorian influenza isolates typed by haemagglutination inhibition assay, samples collected year-to-date, 2022.

- STRAIN A H1PDM09
- A/Victoria/2570/2019-Like
 - A/Victoria/2570/2019-Low Reactor
- STRAIN A H3
- A/Darwin/726/2019-Like
 - A/Darwin/726/2019-Low Reactor
 - Insufficient titre for HI*
- STRAIN B VICTORIA
- B/Austria/1359417/2021-Like
 - B/Austria/1359417/2021-Low Reactor
- STRAIN B YAMAGATA
- B/Phuket/3073/2013-Like
 - B/Phuket/3073/2013-Low Reactor

* Insufficient titre for HI means viruses were unable to be characterised in the HI assay.

- N.B. A/Darwin/6/2019 is the cell equivalent of A/Darwin/9/2021 - H3N2 vaccine strain.
- No isolates have shown resistance to zanamivir, however two isolates have shown resistance to oseltamivir, among the 893 Australian isolates tested so far in 2022.
